Professional Summary

Detail-oriented aspiring Data Analyst with strong hands-on SQL skills, backed by a finance and accounting background. Skilled in validating data quality, identifying trends and anomalies, performing root cause analysis, and translating complex datasets into actionable business insights and recommendations to support data-driven decision-making. Currently pursuing a Data Analytics with Gen AI certification and preparing for the Microsoft PL-300 exam.

Experience

Finance and Accounts Associate (Intern)

May 2025 – Jan 2026

KK Soni and Co., Chartered Accountants

- Analyzed financial and transactional data across **15+ clients** using structured queries and filters to identify cost optimization opportunities and compliance gaps.
- Reduced reconciliation **errors by 30%** by redesigning the data review process, improving data accuracy and reporting reliability.
- Prepared and finalized Balance Sheets, Profit & Loss statements, and Cash Flow Statements from raw financial data.
- **Filed 100+ GST returns** with zero penalties, working to strict deadlines with high attention to detail.
- Prepared Income Tax Returns (ITR) for individuals, firms, and companies, applying structured analysis to financial records.

Data Analytics Projects [GitHub Portfolio](#)

Foodie-Fi Customer Subscription & Churn Analysis

- Customer churn and subscription trends were impacting long-term revenue, requiring analysis to understand customer behaviour and support retention strategies.
- Analyze customer lifecycle data to uncover churn patterns, subscription trends, and opportunities for improving customer retention.
- Evaluate customer journeys and subscription performance using Inner/Left/Right Joins, Group by, Having, Subqueries, CTEs, and window functions and applied aggregate functions and query optimization techniques.
- **Impact:** Delivered a reusable library of **20+ well-documented queries** that cut recurring reporting time by an estimated **40%** and gave stakeholders clear, actionable customer and sales insights.

Amazon Revenue Growth Analysis

- The business observed a decline in Average Selling Price (ASP) but lacked clear insights into the merchant, department, and buyer segments contributing to the decrease.
- Clean and standardize the data and produce clear performance reports for stakeholders.
- Used formulas, Power Query, and pivot tables/charts to clean, validate, and summarize the data.
- **Impact:** Identified that ASP declined by lower-priced purchases across **3+ key merchants, departments, and buyer segments**, enabling targeted pricing recommendations.

Airbnb Sales Performance Dashboard

- Revenue and operational metrics were scattered across multiple datasets, limiting visibility into business performance and decision-making.
- Build a centralized, interactive dashboard for business reporting and decision-making.
- Designed a star-schema data model, cleaned and transformed data in Power Query, and built KPIs, slicers, drill-through pages, and DAX measures.
- **Impact:** Delivered a single centralized dashboard tracking **10+ KPIs** that enabled faster, more confident business decisions.

Education

Certification in Data Analytics with Gen AI (Offline)

Feb 2026 – Present

Physics Wallah (PW Skills) with PwC India

CA Foundation — Institute of Chartered Accountants of India (ICAI)

Jan 2022 – Nov 2023

Cleared, with exemption in Accounts and Economics

Bachelor of Commerce (B.Com) — Delhi University (DU)
